CAREER OBJECTIVE

Computer Science undergraduate with 1500+ rating LC and experience building production-ready full-stack apps using MERN. Developed systems involving authentication, payments, ACID transactions, and scalable REST APIs. Strong understanding of end-to-end system architecture and backend reliability

WORK EXPERIENCE

Campus Ambassador

GeeksforGeeks, Bhopal

Dec 2024 - Dec 2025

Built a full-stack Ledger Flow application using React, Node.js, and MongoDB, implementing transaction tracking and backend APIs for managing financial records. Developed authentication and security features including JWT-based login and token blacklisting, improving session security. Deployed backend services on Render, ensuring live API access and production-level environment setup. Conceptualized and started building Interview AI, an AI-driven platform to analyze resumes, conduct automated interviews, and generate candidate insights.

EDUCATION

B.Tech, Computer Science & Engineering

Oriental College Of Technology

2023 - 2027

PROJECTS

[Skillio | Learning Management System \(LMS\) Platform ↗](#)

Dec 2025 - Mar 2026

Built a full-stack LMS using MERN stack with student and instructor roles Implemented JWT-based authentication and role-based access control for secure routes Designed REST APIs enabling course creation, lecture management, and student enrollment workflows Expanded complete course lifecycle: creation > enrollment > lecture streaming > progress tracking Integrated Razorpay payment gateway with success/failure handling and order verification Optimized data consistency for enrollments, course access, and user progress Deployed on production with scalable backend and secure environment configs

[LedgerFlow - Transaction-Safe Banking Backend ↗](#)

Feb 2026 - Mar 2026

Created and enhanced a transaction-safe banking REST API with modular backend architecture Built ACID-compliant transactions using MongoDB sessions for reliable credit/debit operations Created idempotent APIs to prevent duplicate financial transactions Optimized a ledger-based transaction system, reducing balance retrieval query time to ~120-150 ms Used MongoDB aggregation pipelines to compute real-time account balances Enforced secure logout with token blacklisting for session invalidation Incorporated email notifications using Nodemailer for transaction updates Applied MVC structure (controllers, routes, models) for scalability and clean code Tested APIs using Postman and ensured consistent response handling

[VettorAI - AI Interview SaaS ↗](#)

Mar 2026 - Present

Developed a production-ready AI-powered interview SaaS platform for resume-based mock interviews Executed PDF resume upload and parsing using Multer Blended Generative AI to analyze resumes and generate personalized technical and HR questions Architected a credit-based usage system for controlled access to AI features Merged Razorpay payment gateway for secure transactions Built a responsive React frontend with Framer Motion animations for improved user interaction Deployed full-stack application on Render

SKILLS

- Java
 - Git
 - HTML 5
 - Tailwind CSS
- JavaScript
 - Postman
 - CSS3
 - React
- C Programming
 - REST API
 - Bootstrap
 - Node.js

- Express.js
- MongoDB

ADDITIONAL DETAILS

- Campus Ambassador – GeeksforGeeks: Promoted coding resources and contests on campus, reached 150+ students, drove 40+ sign-ups for coding events, and increased participation in technical learning programs and workshops.
